

Artificial Intelligence : CON

Artificial Intelligence is one of the emerging technologies which tries to simulate human reasoning in AI systems. **John McCarthy** invented the term Artificial Intelligence in the year 1950.

As every bright side has a darker version in it. Artificial Intelligence also has some disadvantages. Let's see some of them

1) High Costs of Creation:

As AI is updating every day the hardware and software need to get updated with time to meet the latest requirements. Machines need repairing and maintenance which need plenty of costs. It's creation requires huge costs as they are very complex machines.

2) Making Humans Lazy:

AI is making humans lazy with its applications automating the majority of the work. Humans tend to get **addicted** to these inventions which can cause a problem to future generations.

3) Unemployment:

As AI is replacing the majority of the repetitive tasks and other works with robots, human interference is becoming less which will cause a major problem in the employment standards. Every organization is looking to replace the minimum qualified individuals with AI robots which can do similar work with more efficiency.

4) No Emotions:

There is no doubt that machines are much better when it comes to working efficiently but they cannot replace the human connection that makes the team. Machines cannot develop a bond with humans which is an essential attribute when comes to Team Management.

5) Lacking Out of Box Thinking:

Machines can perform only those tasks which they are designed or programmed to do, anything out of that they tend to crash or give irrelevant outputs which could be a major backdrop.

Tasks:

- 1. Summarise the negative sides of AI systems.*
- 2. Can you think of other disadvantages? Write them down.*
